

Little Remodeler Playhouse

Jeannette L. Smith, inventor

Independent Claims

What I claim as my invention is:

1. A playhouse kit comprised of at least four walls, one side including a window (Fig 1C) and one side including a doorway (Fig 1A), a back wall (1B) and a side wall (1D) with no windows or doors, with a roof being comprised of four separate pieces or being of one piece (4A, 4B, and 4C) and floor member (2A) designed to fit the size of said playhouse, being made preferably of melamine or a similar material, when completely finished leaves a paintable outside surface and a clean, slick, nonporous inside surface.

What I claim as my invention is:

2. A playhouse that may include any number of cans of paint, preferably watercolor, paint brush, roller and roller tray, preferably child size, allowing the child to paint and repaint the outside of said playhouse, as well as pieces of plain paper, having no design, cut to fit the size of the inner walls, stamps, and stamp pad(s) allowing the child to make their own wallpaper, which may come with a temporary adhesive sprayed on one side, separated by a wax type paper, or a can of spray on adhesive

Independent Claims (continued)

included with the kit.

What I claim as my invention is:

3. A playhouse with corner pieces (3A) at two corners or more, made to allow for the Insertion of wall panels at a 90 degree angle and corner pieces (3B) at all front corners, allowing for the insertion of wall panels at a 90 degree angle and the insertion of additional materials over said wall panels, and a lip (3C) added to the edges of the door opening, which will allow for the insertion of additional materials over the wall panels, designed to alter the appearance of the playhouse.

Dependent Claims

What I claim as my invention is:

1. A playhouse kit that may include additional materials which can be added to said playhouse to alter its appearance, such as brick look (5A) and cedar look (5B) slats to add to the front of said playhouse, shake look roofing (5c) for the roof and plastic square stone look tiles (5C) for the floor, which can all be included in said playhouse or sold separately.

What I claim as my invention is:

2. A playhouse which will have a roof that can be made of four connecting pieces (4A and 4B), connecting together with tabs and slots or a roof being of one piece (4C), either type of roof having a lip added to the sides (3D) and both bottom sections (3E) allowing for additional materials to be slid into place over the top of said roof.
